Description

5.1 Megapixel machine vision camera with Sony IMX CMOS sensor

Prosilica GT2460 is a 5.1 Megapixel camera with a GigE Vision compliant Gigabit Ethernet port and Hirose I/O port. Prosilica GT2460 is offered as monochrome or color models. This camera incorporates the high quality Sony IMX264 CMOS sensor with Pregius global shutter technology. It is a rugged camera with a robust thermal housing that is designed to operate in extreme environments and fluctuating lighting conditions. At full resolution, this camera runs 23.7 frames per second. With a smaller region of interest, higher frame rates are possible. This camera offers Precise iris lens control allowing users to fix the aperture size to optimize depth of field, exposure and gain without the need for additional control elements. It is a standard format housing camera with a standard C-Mount lens mount. By default monochrome models ship with no optical filter and color models ship with an IRC30 IR cut filter.

Benefits and features:

- Monochrome (GT2460) and color (GT2460C) models
- GigE Vision interface with Power over Ethernet
- Screw mount RJ45 Ethernet connector for secure operation in industrial environments
- Supports cable lengths up to 100 meters (CAT-5e or CAT-6)
- Trigger over Ethernet (ToE) Action Commands allow for a single cable solution to reduce system costs
- Comprehensive I/O functionality for simplified system integration
- Popular C-Mount lens mount
- Easy camera mounting via standard M3 threads or optional tripod adapter
- Easy software integration with Allied Vision's Vimba SDK and compatibility to the most popular third party image-processing libraries.
Options:

- Available with F-Mount, CS-Mount, Birger EF-Mount, M42-Mount
- Available with IR cut filter or protection glass

See the Modular Concept for lens mount and optical filters options. See the Customization and OEM Solutions webpage for additional options.

Sony IMX264 absolute QE plot
All measurements were done without protection glass or IR cut filter.
With protection glass or filters, quantum efficiency (QE) decreases by approximately 10%.
The uncertainty in measurement of the QE is +/- 10.25%.
The values are typical and are subject to minor variations.
