USB 2.0 LE series name change

Dear IDS Customer,

As a continued effort to improve marketing and sales, we have changed the model name of our USB 2.0 LE series cameras. These changes had become necessary to provide uniform model names across our growing product range. The new model names are in effect as of 1/1/2012.

The technical specifications and part numbers of all cameras remain the same. All cameras with the new model name will continue to work in current software revisions and be fully compatible with existing implementations.

The camera package will show the old model name in brackets next to the new model name. The serial number on each camera will reflect the new model name only. For a cross-reference list of old and new model names including item numbers see page two of this letter.

Please don't hesitate to contact us with any questions you may have.

Best regards,

Daniel Seiler
Business Development Manager

¹ The appendix for filter types (-HQ, -GL, -DL) does not appear in this table for reasons of simplicity. The filter designation is part of the model name for housed version and board level version with lens holder.

² For customers who had previously bought this model it will continue to be available as a customer specific model. Please contact your sales representative for more information.
