Overview

Fast, sharp, and with megapixel imaging. 100 frames per second and 1.4 megapixels of resolution delivered within a compact camera body.

DALSA's new 1.4 megapixel camera delivers 100 fps at full resolution in a compact body ideal for applications in electronics manufacturing and semiconductor inspection. The camera uses DALSA's patented CMOS sensor technology to deliver global shuttering, global reset, and concurrent integration and readout. The images produced are crisp and clear, avoiding image artifacts associated with rolling shutter.

Fully programmable, via base mini-Camera Link, the camera incorporates exposure control, gain and offset adjustment, and flat-field correction. Ease of use is enhanced through simple camera control and timing, and the ability to transmit data using 10 m long mini-Camera Link cables. Delivered in a robust, compact body, this camera should be your definitive choice for area-based systems.
